Residential

Kimberley's Natural Limestone bricks are available in three sizes: two, three and four times the height of a standard brick course. Not only are they aesthetically pleasing sizes but they simplify the design and construction when substituting natural Kimberley Limestone for extruded clay bricks or cement render construction. These are supplied with the option of a smooth diamond cut finish or the highly textured quarry cut finish reminiscent of the hand hewn stone of the early colonial houses. Kimberley's Natural Limestone bricks have excellent thermal and acoustic qualities combined with affordability.

Commercial

The portfolios of architecturally designed projects include schools, churches, shopping centres, hotels, recreation centres, police stations, wineries and office buildings.

Cladding

Applications range from feature walls and renovations to residential and commercial projects. Kimberley's Limestone cladding is the ideal product for both internal and external applications to create a unique finish.

Paving

Kimberley's Natural Limestone paving is available in a range of sizes and will add instant character to courtyards, terraces and pool surrounds while providing a non-slippery and cool surface.

Rare and enduring beauty to add real value to your project
